

ARGOS S1

Central climate and management computer

- Suitable for use in any pig house and with any ventilation system
- Central overview for maximum 35 rooms
- User-friendly touch screen operation
- Easy Copy-to function of settings from room to room
- Including graphs, alarm log and function log
- Can be directly connected to an Internet router/PC
- Remote access and support

ARGOS S1 - Central climate and management computer

The ARGOS system includes a central climate and management system, the ARGOS S1, from which the required settings for the connected ARGOS S2 or S3 room controllers can be easily made. Up to 35 room ARGOS S2 and/or S3 room controllers can be connected.

Central overviews of the readings and any alarms are displayed in an orderly fashion. The ARGOS S1 allows you to set all required curves and other settings centrally which can be easily copied from one room to another or multiple rooms.

The ARGOS S1 features a colour display with a touch screen. By setting various control levels and password protection, only the functions required are displayed.

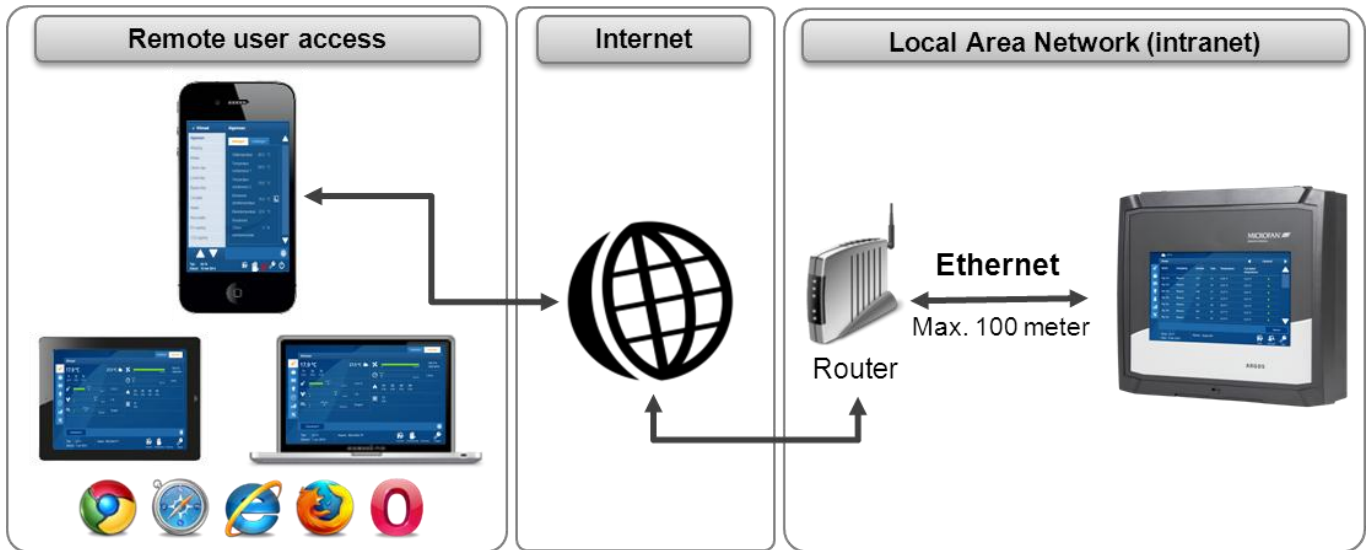

Through the use of modern networking techniques, the ARGOS S1 can be directly connected to the Internet or to a PC, making remote control and reading possible, also via any type of tablet or smartphone.

The ARGOS S1 is also available in a black box version. The system is then controlled through the ARGOS PC & Web Connect program on PC.

ARGOS PC & Web Connect

PC & remote user access through Microfan Web Portal via smartphone, tablet, laptop or PC

| Technical specifications | ARGOS S1 |
|---------------------------------------|---|
| Housing | plastic IP54 |
| Dimensions (WxHxD) | 315x285x100mm |
