- ✓ Combi Pullet

Overview of Farmer Automatic Systems

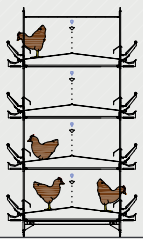

Layers

Housing System

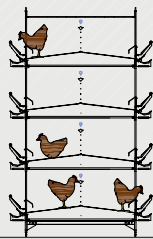

Classic is a closed, modular housing system for layers that is available with three to eight tiers. The system is also available in the Classic Plus version with a greater section depth, or in the Classic Base version with a smaller section depth.

Small Group Housing System

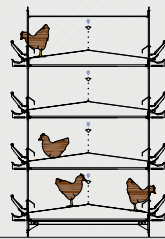

The Eco systems are colony systems developed for housing small groups of layers and complies with EU directives. The systems can be combined for efficient utilization of available floor space.

▲ Eco II Medium

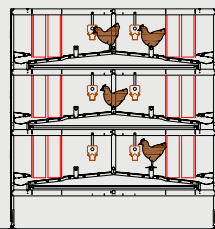

Alternative Systems / Aviaries

Farmer Automatic offers four open, alternative layer housing systems: Loggia, Combi, Compact and Alterna. Combi can be used as closed system, too. These systems are characterized by their ease of operation and optimum utilization of space.

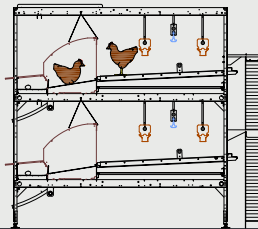

In order to meet different operational requirements and customer needs, nearly all of these systems are also offered in Plus versions with wider sections.

Pullets

Rearing Systems

Farmer Automatic offers a variety of layer rearing systems. Classic Pullet is the proven system for conventional rearing. Combi Pullet supports rearing of livestock in both conventional and alternative housing.

They are all equipped with features that adapt flexibly to match livestock growth and health, thus encouraging the best possible physical development of the pullets.

Broiler

Broiler Growing System

The Farmer Automatic Broiler system is an economically efficient housing system for growing broilers. With its high level of automation the Broiler system supports fast, convenient management of both the system and the

livestock. The system can be configured for up to four tiers to maximize utilization of available floor space and to optimize stocking density. The system is also available in the Broiler Plus version with deeper sections.
